**Subject:** Revised DRAFT Ethylene Oxide O fact sheet

Just clarified that the EPA 2016 IRIS estimated 100-in-1 million risk level concentration is  $0.02 \mu\text{g}/\text{m}^3$ . TCEQ's Draft EtO ESL is higher. TCEQ set their draft ESL value at  $7 \mu\text{g}/\text{m}^3$  for a cancer risk level of 1 in 100,000 (which corresponds to  $70 \mu\text{g}/\text{m}^3$  at 100 in a million risk)
